Initial \_\_\_\_\_

**Recommended:**

These items are highly recommended, NOT required. Please initial next to the items you want to include. Please ask the receptionist if you have any questions.

PLEASE FILL OUT COMPLETELY.

- **Pre-Anesthetic Profile** \_\_\_ \$60(6 Chemistries)/ \_\_\_\$80(12Chemestries)/PCV/T.P.\_\_\$26  
Blood tests are taken before anesthesia to evaluate any problem existing within the body and also to help select the best anesthesia for us to use. Blood tests help minimize the risks of the anesthesia.
- **Subcutaneous Fluids or IV Fluids** \_\_\_\$30 (includes setup fee normally \$28). Helps maintain blood pressure during surgery, also replaces fluids that you pet has lost while fasting and during anesthesia.
- **IV Catherterization**\_\_\_\$28 Catheter placement is vital should life-saving medications need to be give or should a problem occur during or while recovering from anesthesia.
- **Blood Pressure** \_\_\_ \$25 Monitoring blood pressure is especially important in pets that are under anesthesia, sub clinically ill, or have heart problems. A drop in blood pressure can indicate shock or internal bleeding. This can also be useful for monitoring anesthetic depths.
- **Microchip (Home Again)**\_\_\_ \$39 Complete nationwide system for recovering lost or stolen pets. Recommended to do while pet is under anesthesia. There is an additional registration charge by the microchip company.
- **Take Home Products:**

These products are recommended for the comfort and proper healing of your pet after her surgery. Please initial next to any product that you want to take home.
